

# CD405xB CMOS Single 8-Channel Analog Multiplexer or Demultiplexer With Logic-Level Conversion

## 1 Features

- Wide range of digital and analog signal levels:
  - Digital: 3V to 20V
  - Analog:  $\leq 20V_{P-P}$
- Single supply range : 3V to 20V (performance degrades for  $V_{DD} < 3V$ )
- Dual Supply range:  $\pm 3V$  to  $\pm 10V$
- Low ON resistance,  $125\Omega$  (typical) over input range for  $V_{DD} = 15V$
- Low channel leakage of  $\pm 10pA$  (typical) at  $V_{DD} = 15V$
- Low quiescent power dissipation :  $0.2\mu W$  (typical)
- Break-before-make switching eliminates channel overlap
- Bidirectional signal path
- ESD protection HBM: 3000V, CDM: 2000V
- Pin compatible with industry standard 4051 muxes

## 2 Applications

- Analog and digital multiplexing and demultiplexing
- Analog to digital and digital to analog conversion
- Signal gating
- **Factory automation**
- **Televisions**
- **Appliances**
- **Consumer audio**
- Programmable logic circuits
- **Sensors**

## 3 Description

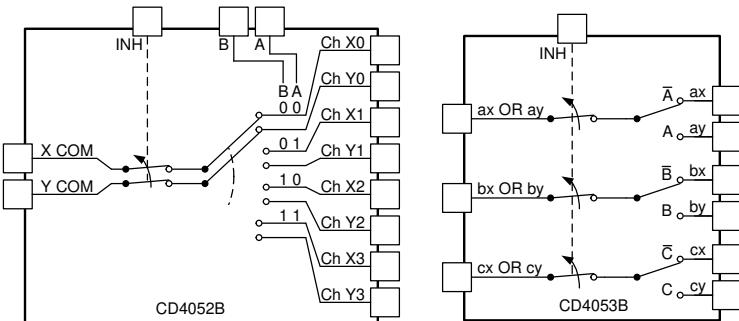

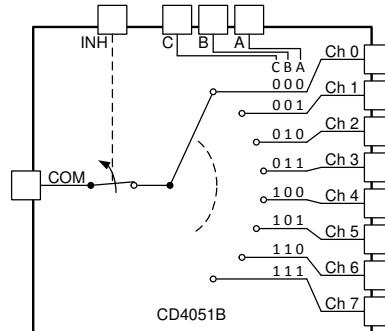

The CD405xB analog multiplexers and demultiplexers are digitally-controlled analog switches having low ON impedance and very low OFF leakage current. These multiplexer circuits dissipate extremely low quiescent power over the full  $V_{DD} - V_{SS}$  and  $V_{DD} - V_{EE}$  supply-voltage ranges, independent of the logic state of the control signals.

### Package Information

PART NUMBER	PACKAGE (1)	PACKAGE SIZE(2)
CD405xB	J (CDIP, 16)	19.50mm × 6.92mm
	N (PDIP, 16)	19.3mm × 9.4mm
	D (SOIC, 16)	9.9mm × mm
	NS (SOP, 16)	10.2mm × 7.8mm
	PW (TSSOP, 16)	5mm × 6.4mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

(2) The package size (length × width) is a nominal value and includes pins, where applicable.

**Functional Diagrams of CD4051B**

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup> <sup>(2)</sup>

			MIN	MAX	UNIT
	Supply Voltage	V+ to V-, Voltages Referenced to V <sub>SS</sub> Terminal	-0.5	20	V
	DC Input Voltage		-0.5	V <sub>DD</sub> +0.5	V
	DC Input Current	Any One Input	-10	10	mA
T <sub>JMAX1</sub>	Maximum junction temperature, ceramic package			175	°C
T <sub>JMAX2</sub>	Maximum junction temperature, plastic package			150	°C
T <sub>stg</sub>	Storage temperature		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.

### 5.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±3000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±2000	

(1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

### 5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
	Temperature Range	-55		125	°C

### 5.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		CD405x				UNIT
		E (PDIP)	M (SOIC)	NS (SOP)	PW (TSSOP)	
		16 PINS	16 PINS	16 PINS	16 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	67	73	64	116.5	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application report](#).

## 5.5 Electrical Characteristics

**Special Considerations:** In applications where separate power sources are used to drive  $V_{DD}$  and the signal inputs, the  $V_{DD}$  current capability should exceed  $V_{DD}/R_L$  ( $R_L$  = effective external load). This provision avoids permanent current flow or clamp action on the  $V_{DD}$  supply when power is applied or removed from the CD4051B, CD4052B or CD4053B.

## 7 Detailed Description

### 7.1 Overview

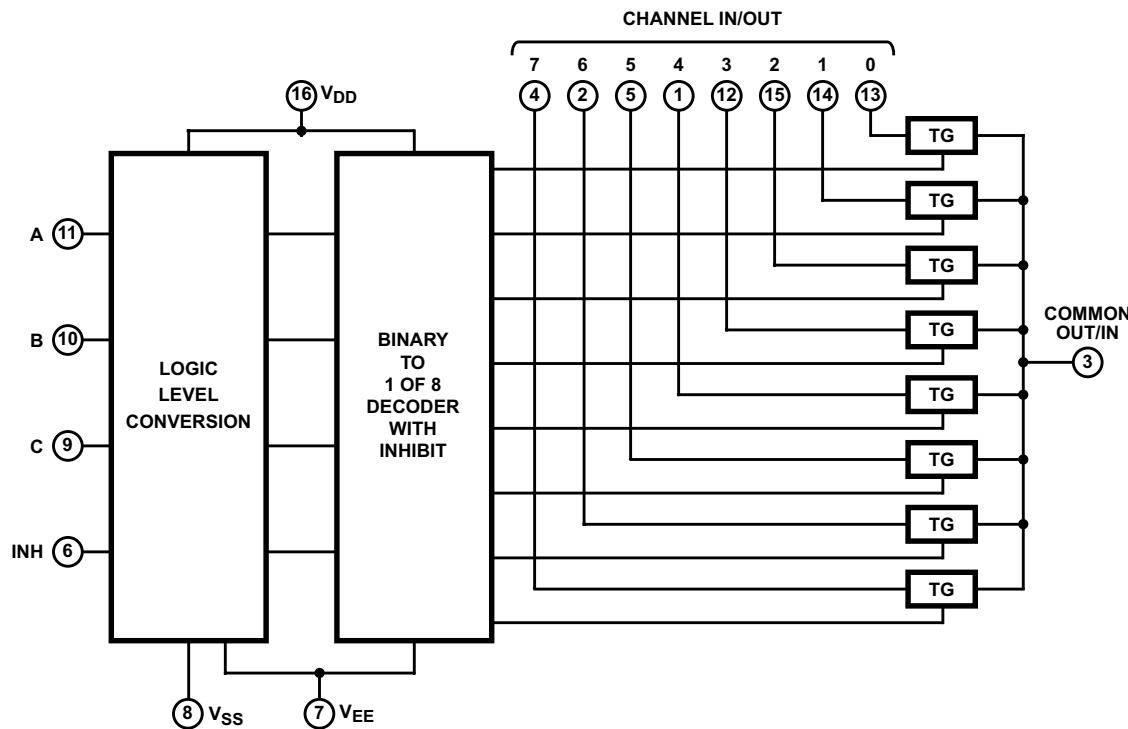

The CD4051B device is a single 8-channel multiplexer having three binary control inputs, A, B, and C, and an inhibit input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

The CD4052B device is a differential 4-channel multiplexer having two binary control inputs, A and B, and an inhibit input. The two binary input signals select 1 of 4 pairs of channels to be turned on and connect the analog inputs to the outputs.

The device is a triple 2-channel multiplexer having three separate digital control inputs, A, B, and C, and an inhibit input. Each control input selects one of a pair of channels which are connected in a single-pole, double-throw configuration.

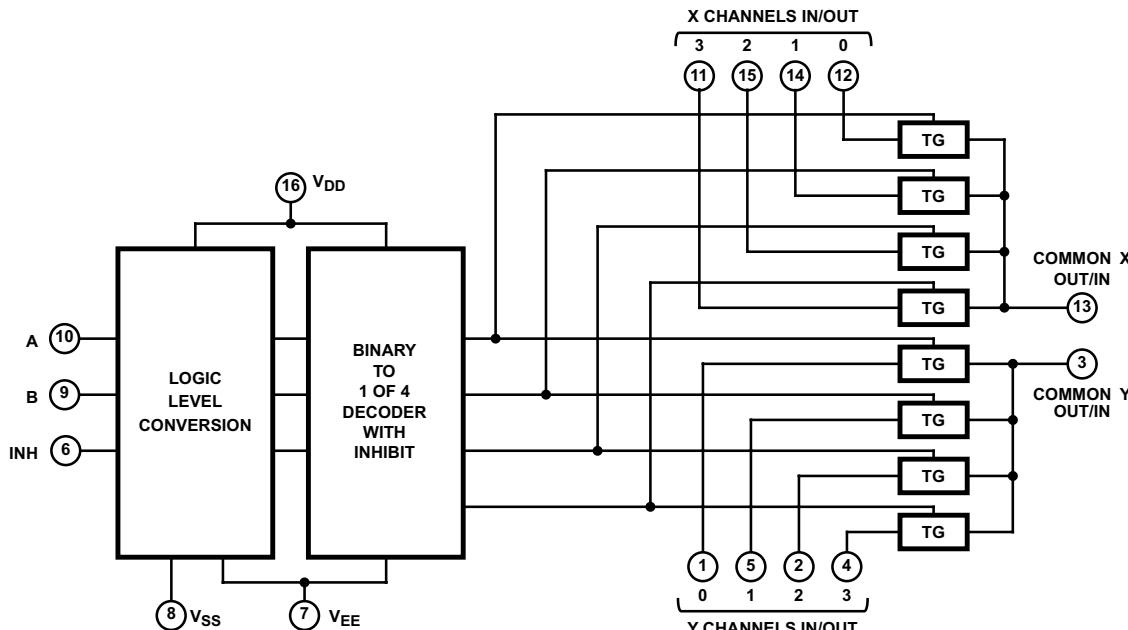

When these devices are used as demultiplexers, the CHANNEL IN/OUT terminals are the outputs and the COMMON OUT/IN terminals are the inputs.

## 7.2 Functional Block Diagrams

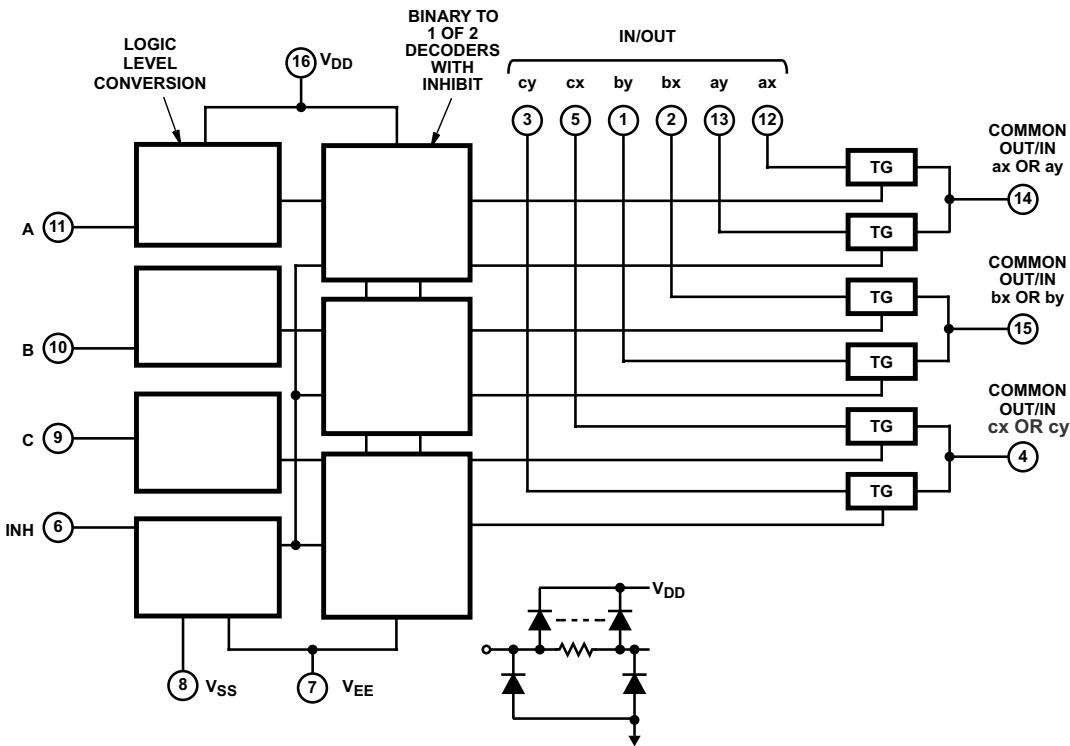

All inputs are protected by standard CMOS protection network.

**Figure 7-1. Functional Block Diagram, CD4051B**

All inputs are protected by standard CMOS protection network.

**Figure 7-2. Functional Block Diagram, CD4052B**

All inputs are protected by standard CMOS protection network.

**Figure 7-3. Functional Block Diagram, CD4053B**

### 7.3 Feature Description

The CD405xB line of multiplexers and demultiplexers can accept a wide range of digital and analog signal levels. Digital signals range from 3V to 20V, and analog signals are accepted at levels  $\leq 20V$ . The devices have low ON resistance, typically  $125\Omega$  over  $15V_{P-P}$  signal input range for  $V_{DD} - V_{EE} = 18V$ . This feature allows for very little signal loss through the switch.

The CD405xB devices also have high OFF resistance, which keeps the devices from wasting power when the switch is in the OFF position, with typical channel leakage of  $\pm 100pA$  at  $V_{DD} - V_{EE} = 18V$ .

Binary address decoding on the chip makes channel selection simple. When channels are changed, a break-before-make system eliminates channel overlap.

## 7.4 Device Functional Modes

## 8 Application and Implementation

### Note

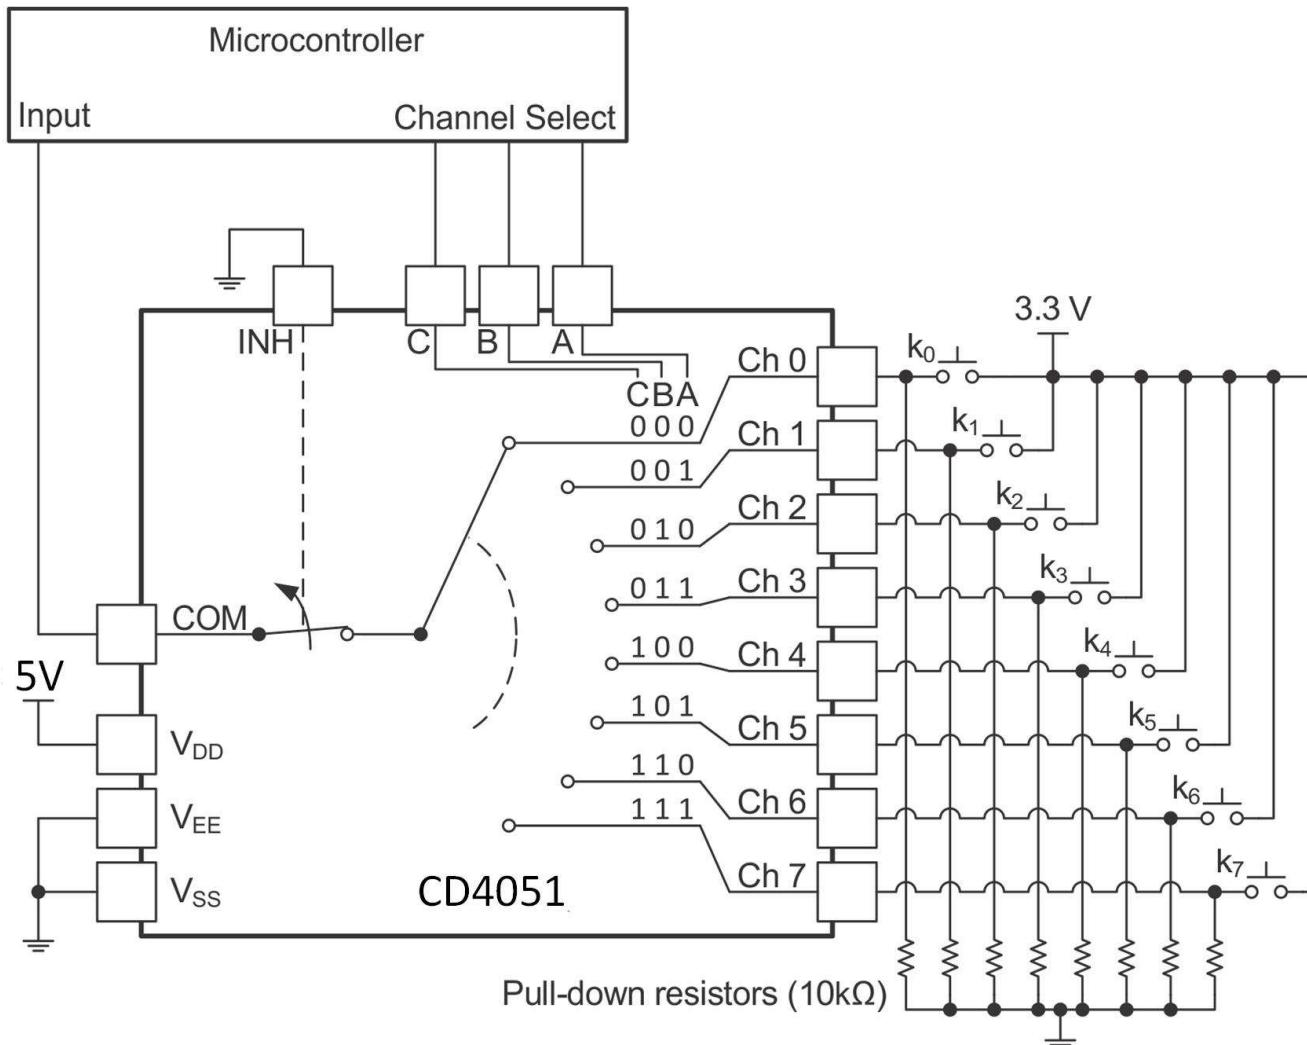

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

The CD405xB multiplexers and demultiplexers can be used for a wide variety of applications.

### 8.2 Typical Application

One application of the CD4051B is to use it in conjunction with a microcontroller to poll a keypad. [Figure 8-1](#) shows the basic schematic for such a polling system. The microcontroller uses the channel select pins to cycle through the different channels while reading the input to see if a user is pressing any of the keys. This application is a very robust setup, allowing for multiple simultaneous key-presses with very little power consumption. This setup also uses very few pins on the microcontroller. The down side of polling is that the microcontroller must continually scan the keys for a press and can do little else during this process.

**Figure 8-1. The CD4051B Being Used to Help Read Button Presses on a Keypad**

### 8.2.1 Design Requirements

These devices use CMOS technology and have balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions should be considered to prevent ringing.

### 8.2.2 Detailed Design Procedure

#### 1. Recommended Input Conditions:

- For switch time specifications, see propagation delay times in [Electrical Characteristics](#).
- Inputs should not be pushed more than 0.5V above  $V_{DD}$  or below  $V_{EE}$ .
- For input voltage level specifications for control inputs, see  $V_{IH}$  and  $V_{IL}$  in [Electrical Characteristics](#).

#### 2. Recommended Output Conditions:

- Outputs should not be pulled above  $V_{DD}$  or below  $V_{EE}$ .

#### 3. Input or output current consideration:

- The CD405xB series of parts do not have internal current drive circuitry and thus cannot sink or source current. Any current will be passed through the device.

### 8.2.3 Application Curve

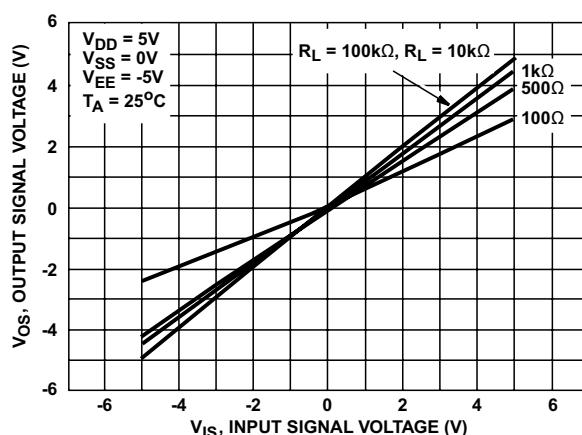

Figure 8-2. ON Characteristics for 1 of 8 Channels (CD4051B)

## 8.3 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Electrical Characteristics](#).

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a  $0.1\mu F$  bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a  $0.01\mu F$  or  $0.022\mu F$  capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a  $0.1\mu F$  bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise.  $0.1\mu F$  and  $1\mu F$  capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

## 8.4 Layout

### 8.4.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This reflection is primarily due to the change of width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace — resulting in the reflection. It is a given that not all PCB traces can be straight, and so they will have to turn corners. Figure 8-3 shows progressively better techniques of rounding corners. Only the last example maintains constant trace width and minimizes reflections.

### 8.4.2 Layout Example

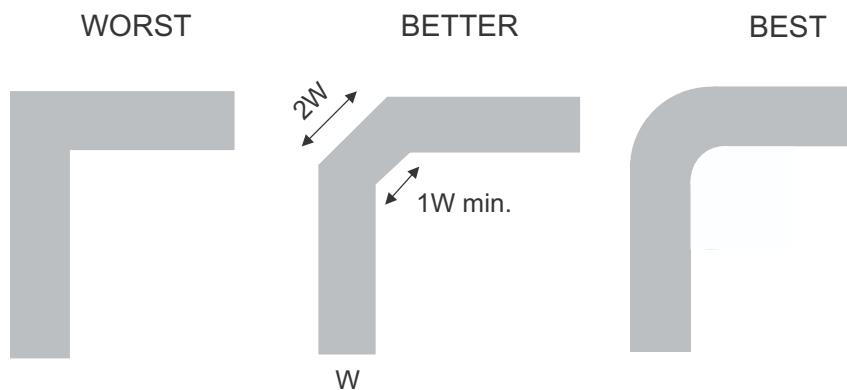

Figure 8-3. Trace Example

## 9 Device and Documentation Support

### 9.1 Documentation Support

#### 9.1.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, [Implications of Slow or Floating CMOS Inputs](#)

### 9.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 9.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 9.6 Glossary

#### TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

## 10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision M (November 2024) to Revision N (February 2025)</b>	<b>Page</b>
• Updated <a href="#">Section 1</a> .....	1
• Removed Figure 5-4 and Figure 5-5.....	11
• Updated <a href="#">Section 7.1</a> .....	15
• Updated <a href="#">Section 7.3</a> .....	17
• Updated Figure 8-1 to 5V VDD.....	19

<b>Changes from Revision L (September 2023) to Revision M (November 2024)</b>	<b>Page</b>
• Updated the <i>Typical Characteristics</i> section.....	11
• Added Figure 5-4 and Figure 5-5.....	11

<b>Changes from Revision K (March 2023) to Revision L (September 2023)</b>	<b>Page</b>
• Changed the format of the <i>Package Information</i> table to include package lead size.....	1
• Changed the format of the <i>ESD Ratings, Electrical Characteristics, and AC Performance</i> to consolidate package specifications.....	5

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) Status: For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.  
Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown.  
Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "—" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## PACKAGE OPTION ADDENDUM

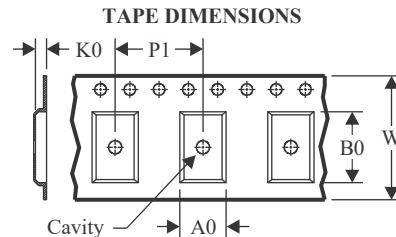

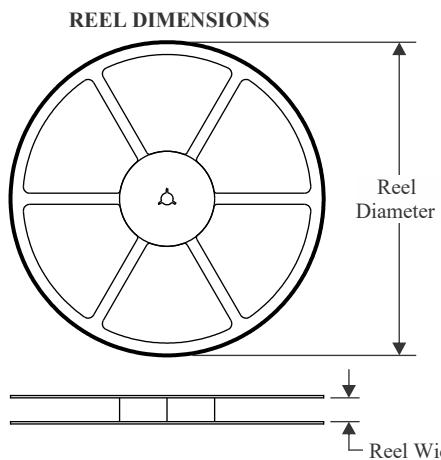

### OTHER QUALIFIED VERSIONS OF CD4051B, CD4051B-MIL, CD4052B, CD4052B-MIL, CD4053B, CD4053B-MIL :

- Catalog : [CD4051B](#), [CD4052B](#), [CD4053B](#)
- Automotive : [CD4051B-Q1](#), [CD4051B-Q1](#), [CD4052B-Q1](#), [CD4053B-Q1](#)
- Military : [CD4051B-MIL](#), [CD4052B-MIL](#), [CD4053B-MIL](#)

NOTE: Qualified Version Definitions:

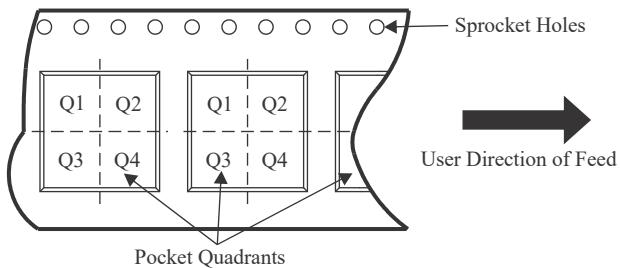

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Military - QML certified for Military and Defense Applications

## NOTES:

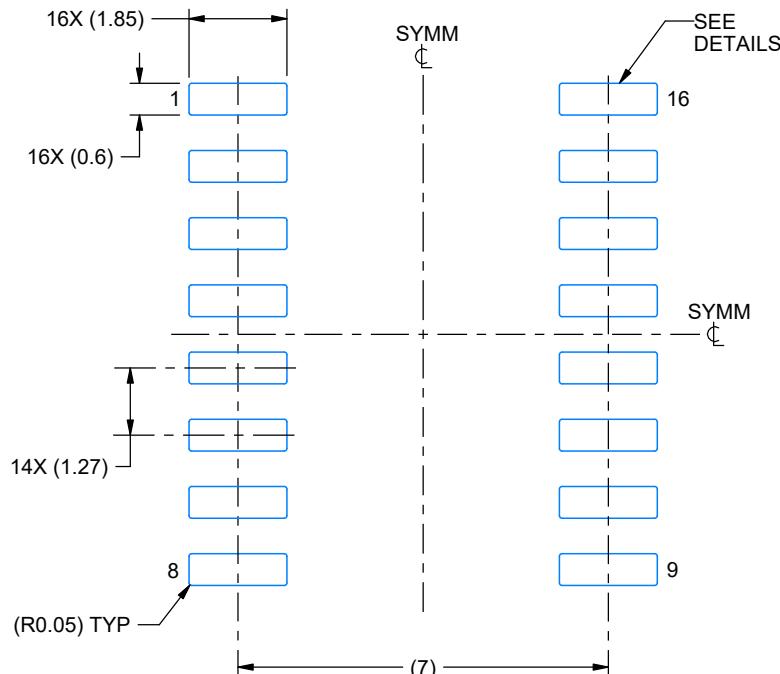

- All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
- This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.

# PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

NOTES: A. All linear dimensions are in inches (millimeters).  
B. This drawing is subject to change without notice.

 Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).

 Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).  
 The 20 pin lead length will be 1.2 times the minimum lead length.

 The 20 pin end lead shoulder width is a vendor option, either half or full width.
